

SkinPen Microneedling Consent Form

Microneedling is a type of collagen induction therapy using small needles to create microinjuries and increase collagen production.

Microneedling can treat many concerns, including:

- large pore size
- fine lines and wrinkles
- hyperpigmentation
- skin texture and tone
- acne scarring

Microneedling is similar to the sensation of rubbing sandpaper on your skin. Using a special compounded numbing cream, your treatment will have minimal discomfort.

You can expect mild redness, irritation and temporary change in texture to the face, lasting a few days. Sunscreen will need to be applied the days following your procedure.

The number of microneedling treatments required varies depending on your skin concerns, which will be discussed with your provider. To maintain your results, the staff at Inject can recommend products and maintenance plan to best benefit you post-treatment.

The Patient understands there is no guarantee to this procedure and confirms that they have informed Inject of all their medical details relevant to this treatment and will update these throughout the course of the treatments should any details change.

By signing this consent, the patient agrees that they have read and fully understood this document and consents to the treatment outlined above and will follow prescribed directions regarding post procedure care and home care.
