

## EMSCULPT NEO INTAKE FORM

The EMSCULPT NEO is indicated for non-invasive lipolysis (breakdown of fat) of the abdomen and thighs with Skin Types I to III and for reduction in circumference of the abdomen and thighs in Skin Types I to III. The device is also cleared for improvement of abdominal tone, strengthening of the abdominal muscles, development of firmer abdomen. Strengthening, toning and firming of buttocks, thighs and calves. Improvement of muscle tone and firmness, for strengthening muscles in arms.

Your treatment provider will discuss your specific treatment needs. The recommended number of treatments is 4. The treatment is typically about 20-30 minutes per session, with sessions separated by 5 to 10 days (or 2-3 days for HIFEM Classic protocols). Completing a full treatment series is necessary to maximize treatment efficacy. You may need additional treatments, depending on your goals.

Before the treatment, you are not required to do anything special, however, keeping your body well hydrated is strongly recommended. On the day of the treatment, you are advised to wear comfortable clothing, allowing flexibility for correct positioning during the treatment. You will be asked to remove all metallic accessories and electronic devices.

I acknowledge that a successful treatment outcome can be affected by smoking or excessive alcohol consumption and eating disorders or on-going medication. While no special diet is required, you are encouraged to eat healthy to help promote and maintain results.

The treatment does not require anesthesia. During the application, you will feel intense muscle contractions and heating sensation in the treated area. The procedure doesn't require any recovery time. Typically, you can get back to your daily routine right after the treatment.

I am aware NOT TO wear any metallic accessories (such as jewelry, watch or clothes containing metallic threads or metallic accessories) during the treatment. I also acknowledge that I do not have any metallic or electronic implants (such as pacemakers, defibrillators, metallic IUDs, etc.)
